

FABULASH BROWS

BLUSH HAIRSTROKE BY MACHINE

Latest Technique in eyebrow PMU

Master Judy Nguyen

What is hairstroke by machine?

Hairstroke by Machine is an advanced technique using cartridge needle attached to the machine to create hairstroke pattern that is blended well with natural brow hairs.

What is Blush hairstroke by machine?

Blush hairstroke by machine technique uses Blush water based nano pigment that penetrates the skin faster and retain up to 100% when the brows are healed if the artist has a good shading technique.

Hairstroke by machine vs Microblading

The hairstroke method can be done on all skin types, for both male and female. It especially works well on old, tattooed brows and brows with scar (brows with too many laser or removal sessions). These are the types of brows that Microblading technique can't be performed on.

Compared to microblading technique, hairstroke by machine makes brows look more natural and artistic. However, it only lasts 9-12 months in most types of skin, and a touch-up session is needed once the brows fade. This

hairstroke technique can also be used to touch-up old microblading eyebrows

To join this class, you need to have previous experience in using cosmetic tattoo machine and needles. Beginners also can learn this hairstroke technique, however a lot of practising would be required to make sure you are confident with tattoo machine and needle before the workshop.

The course content will cover

- Blush nano pigment and colour theory
- Machine, needles and how they work
- Eyebrow shapes, hairstroke patterns on paper and latex
- Practice hairstroke by machine on latex
- Practice on live model
- Tips and tricks for a good healing result

Course structure

2 days training workshop

- Day 1: theory & practice on latex
- Day 2: practise on live model

Training Kit (optional): 5 Blush nano pigments

Course fee:

- 2 day workshop with kit: 4600 NZD plus GST
- Online training with kit: 2500 NZD plus GST (only available after September 2022)
